

Macintosh Supplement for HMSL

Table of Contents

Chapter 1: HMSL on the Macintosh

What is HForth?.....	1
Requirements for running HMSL.....	1
Installing HMSL.....	1
Backing Up HMSL.....	1
Installing HMSL on a hard disk.....	1
Installing the Apple MIDI Manager.....	2
Installing the PatchBay Desk Accessory.....	2
IMPORTANT - Setting the ASSIGNS for your Hard Disk (logical volume names).....	3
Running HMSL.....	4
Testing MIDI Output.....	4
Troubleshooting MIDI.....	4
Compiling Programs.....	5
Compilation Errors.....	5
Editing Programs.....	5
Expanding the Dictionary.....	6

Chapter 2: Beginning Forth Tutorial

Intended Audience.....	1
Forth Syntax.....	1
The Stack.....	1
Arithmetic.....	4
Defining a New Word.....	5
More Arithmetic.....	5
Arithmetic Overflow.....	6
Character Input and Output.....	6
Answers to Problems.....	8

Chapter 3: Intermediate Forth Tutorial

Editing Programs in Files.....	1
Sample Program.....	1
INCLUDE the Program.....	2
Variables.....	3
Constants.....	4
Logical Operators.....	5
Flow of Control.....	6
Loops.....	7
Text I/O.....	9
Changing Numeric Base.....	10
Answers to Problems.....	11

Chapter 4: Forth Tools

Local Variables.....	1
----------------------	---

Command Line History.....	2
Using DEFER for vectored words.....	3
Potential Problems with Defer.....	4
Tools for FORGET: ANEW, INCLUDE?, TASK-, etc.....	4
Creating a Turnkeyed Application.....	6

Chapter 5: File Input and Output

Introduction.....	1
File I/O Tutorial.....	1
Creating a Text File.....	1
Reading a Text File.....	2
Using Binary Data Files.....	2
Host Independant Words.....	3
Macintosh Specific Words.....	4
File Dialogs.....	6
Logging to Files.....	7
File Transfer Between Mac and Amiga.....	7

Chapter 6: Debugging

Introduction.....	1
Tools Overview.....	1
Debugging Hints.....	1
Source Level Debugger Tutorial.....	2
Compiling with DEBUG{.....	3
Examining Code.....	3
Stopping with a Breakpoint.....	4
Stopping with Control-D.....	4
Debugging a Large Program.....	5
Debugging a Turnkeyed Program.....	5
IMMEDIATE Words and Locals.....	5
Source Level Debugger Glossary.....	5
Debugger One Key Commands.....	6

Chapter 7: Floating Point Arithmetic

Introduction.....	1
Floating Point Tutorial.....	1
Simple Arithmetic and Output.....	1
Transcendental Functions.....	1
Turnkeying Floating Point Code.....	2
Floating Point Glossary.....	2
Floating Point Control.....	2
Arithmetic Operators.....	2
Transcendental Functions.....	3
Logical Operators.....	3
Stack Operators.....	3
Number Storage.....	3
Number Conversion Operators.....	3
Display Operators.....	4
Number Interpreters.....	4

Chapter 8: MIDI Manager and Custom MIDI

Selecting between the MIDI Manager and Custom MIDI.....	1
Comparing the MIDI Manager and Custom MIDI.....	1

MIDI Manager Problems.....	2
Output Buffer Fills Up - MIDIM.SEND.....	2
Serial Ports in Use.....	2
Using Both Ports.....	2
HMSL Timing and SMPTE.....	3
Further Information.....	3

Chapter 9: HForth Internals

Abstract.....	1
HForth Compared to Other Forths.....	1
Macintosh Head/Tail Optimization.....	3
HForth Memory Map.....	3
Explanation of Flag Field.....	6

Chapter 10: Macintosh Interface

Calling Macintosh ROM Traps.....	1
Using ToolBox Records.....	2
HForth Event Handling.....	3
Example Program that uses Toolbox.....	4
Getting Rid of HMSL Menus for Turnkey.....	5

Chapter 11: Graphics Toolkit

Overview.....	1
Graphics Tutorial.....	1
A Simple Graphics Program.....	1
Opening Other Windows.....	2
Generic Graphics Glossary.....	3
Control Routines.....	3
Output Primitives.....	4
Output Attributes.....	5
Macintosh only Graphics Routines.....	5
Graphics Input.....	5
Event Driven Programming.....	5
Routines in HH:H4TH_EVENTS - EV.xxxx.....	5
Advanced Graphics and Event Topics.....	6

HForth Glossary
